

# SPI

## SCREEN PRINT INNOVATIONS

RECONNECTING THE SCREEN COMMUNITY

**3-5 JUNE 2025**  
**MESSE ESSEN, GERMANY**  
**[spi-europe.com](http://spi-europe.com)**

- HIGH PRECISION • IN-MOULD ELECTRONICS
- MICRO DETECTABLE SECURITY PRINTING
- WEARABLES • HEALTHCARE AND BIOMEDICAL
  - FLEXIBLE DISPLAYS AND TOUCH PANELS
  - PACKAGING • AUTOMOTIVE • TEXTILES
- SUSTAINABILITY • RESOURCE EFFICIENCY
  - AUTOMATION • ROBOTICS

# SCREEN PRINTING HAS A NEW HOME

Automotive, printed electronics, Internet of Things, healthcare, luxury packaging, textiles... are examples of how screen printing has established itself as a reliable manufacturing solution. Although seasoned, the process keeps on evolving and advancing in terms of precision, automation and quality. At the same time, it keeps its promise of resource efficiency and adaptability both in terms of volume and sustainability requirements.

The brand new SPI show builds a new home for all industrial, functional and textile market

applications where screen technology leads and innovates. The horizontal approach means that at Screen Print Innovations, technology will meet market applications, suppliers will meet users, industry will meet industry. Together we promote screen as a process and reconnect the community.

## WHO WILL JOIN SPI 2025?

**BRANDS** because screen and pad printing are extremely diverse. If you are a current user, then it will be an eye-opener to see how these processes are used in unrelated fields. Some of the best development ideas come from adapting processes from seemingly different markets. If you are new to screen and or pad, come to understand the capabilities of the thriving technologies.

## WHY SCREEN PRINTING?

The screen and pad market is alive and well. Its unique capabilities keep it the single most, economically adaptable print process for limited and mass production of items.

Screen printing stands for:

- precise application of high-resin inks
- consistent quality output
- ink laydown, opacity and colour intensity
- adhesion and durability
- cost-effectiveness for reasonable print run lengths
- ability to standardise

- open system, adaptable for industrial conditions for and during production
- ease to combine with digital, offset, flexo...
- the best of both worlds: decoration and functionality

## WHO WILL JOIN SPI 2025?

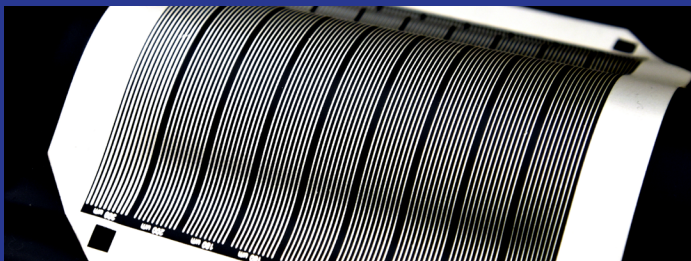

### **PRINTERS AND PRINT SERVICE PROVIDERS**

because this is a pioneer format specifically for the screen and pad market. Whether you plan to exhibit, to show your innovations to potential new customers or learn what suppliers have to offer, your community now has these focused options.

## WHY SCREEN PRINT INNOVATIONS?

Application across various market segments drives continual innovation. The key is disseminating that innovation. ESMA, the European Specialist Printing Manufacturers Association, looks back at the experience and know-how accumulated in over 30 years of its service to industrial, functional and specialist printing community. With 70 members, ESMA has become the Knowledge Hub of the industry.

Together we have recognised the need for a new solid format which will:

- enable the community to exchange ideas on innovation
- provide a platform to discuss what is happening in today's print world
- present the newest innovations
- witness the strength of these technologies

## WHO WILL JOIN SPI 2025?

**SUPPLIERS** because SPI is your chance to demonstrate the breadth of your innovation, present solutions to attendees, and to reconnect to a market going strong.

# SPI LAUNCH PARTNERS

Among SPI's launch partners are world leading suppliers of screen print technology. Altogether more than 70 exhibitors and thousands of visitors are expected at SPI 2025.

WANT TO JOIN THEM?

Contact us at [info@esma.com](mailto:info@esma.com)

## VENUE

SPI takes place on 3-5 June 2025 at the modern facilities of Messe Essen, Germany. Close cooperation with Messe Essen gives us flexibility in stand design and planning. The fairground is centrally located and easily accessible in the Ruhr region, the third largest metropolitan area in Europe. The excellent transportation network ensures rapid and relaxed arrival and departure. Exhibitors and visitors from Germany and abroad can arrive by car, train, plane and caravan. Düsseldorf Airport is only 20 minutes' drive from the venue.

## ORGANISERS

Screen Print Innovations (SPI) is organised by ESMA, the European Specialist Printing Manufacturers Association. Together with our partner and industry veteran, Jonathan Bultemeyer, we invite you to join this new platform for networking and learning about the disruptive developments in screen printing across all market sectors.
